The comb on the background the distances fix, with nothing fitted to the microwave data
control, nothing fitted (χ^2/bin = 1.13)
CR arm, nothing fitted (χ^2/bin = 2.65)
control, refitted (0.99)
CR arm, refitted (1.60)
Planck TT bandpowers
$\mathcal{D}_\ell = \ell(\ell+1)C_\ell/2\pi$ [μK^2]
background from DESI DR2 BAO alone: (68.62, 0.2974) at 0.958/dof
179 bins, 100 ≤ ℓ ≤ 1900; amplitude closed-form, four parameters free only in the dashed curves
binned AT the period ℓ_A = 298 -- a slow swing, because averaging
over one cycle cancels a modulation whose phase IS that cycle
CR arm, nothing fitted
CR arm, refitted
control, nothing fitted
control, refitted
whitened residual, band mean
multipole ℓ
FOLDED by phase within ℓ_A -- one harmonic at ℓ_A:
arm 0.95 ± 0.16 (6.0σ) against control 0.20 ± 0.11 (1.8σ)
CR arm, nothing fitted (6.0σ)
CR arm, refitted (7.0σ)
control, nothing fitted (1.8σ)
control, refitted (1.0σ)
whitened residual, phase-bin mean
phase within the comb period
(0 = a peak, 0.5 = a trough)
