

The comb on the background the distances fix, with nothing fitted to the microwave data

binned AT the period $\ell_A = 298$ -- a slow swing, because averaging over one cycle cancels a modulation whose phase IS that cycle

FOLDED by phase within ℓ_A -- one harmonic at ℓ_A :
arm 1.37 ± 0.15 (9.1σ) against control 0.20 ± 0.11 (1.8σ)
